👋 Hello! I am a Senior Frontend Developer with 8 years of experience.

I develop with React and TypeScript. I have worked on projects using Vue and Angular 2+. Automation with Node.js and Python is in my skillset. I pay attention to code architecture, maintainability, and complexity.

I am able to create design systems in collaboration with designers. I educate frontend developers and improve communication processes. I provide detailed code reviews with explanations, avoiding accusations and harmful criticism.

Teamwork is important to me: I am experienced in agile methodologies and can plan in uncertainty. I conduct task grooming and retrospectives, avoiding wasted collective time. I easily build trustful relationships with colleagues.

Experience

- ### Frontend Lead @ Xyro.io (Web3, GamyFi, SocialFi)

  Remote, full-time, January '23 — present

  - Implemented a killer feature: a gaming price chart for cryptocurrencies with real-time updates. Documented the code and screen recordings to help the rest of the team understand the magic happening there. Demo ▶
  - Developed core features: 3 out of 5 gaming modes, while maintaining and enhancing all 5.
  - Created a multi-step authentication flow: OAuth, Web3, login via referral code, and NFT
  - Defined a flexible system design (FSD) and the technical stack for the application
  - Ensured the consistency of the design system despite changes in the design team, pivots, and transition to a mobile audience

- ### Frontend dev @ Vilantis.ai (Lithuanian outsourcer)

  Remote, contractor, part-time, April '22 — December '22

  Projects: service for American clinic patients (Nuxt.js), website with statistics of Lithuanian companies (Next.js)

  - Features: booking consultations and treatment appointment forms

- Updated an outdated project (JS/Vue2) for compatibility and maintainability (Vue 2 → 2.7, Nuxt 2 → Bridge)
- Achieved strong typing and data type transparency when switching to TS was limited by the stakeholder (JSDoc + VSCode)
- Added type autogeneration from GraphQL

- ## Lead Frontend Developer @ 12 Storeez (Marketplace, internal services)

  Remote, full-time, August '21 — January '22

  Project: internal logistics service for managing order delivery across multiple countries

  - Developed the frontend service from scratch (Angular 13, Nx)
  - Conducted team retrospectives → made it easier to prevent burnout and acknowledge improvements
  - Improved the accuracy and speed of the team's poker planning (15 minutes instead of 30+)
  - Initiated and conducted product update demos with clients → product requirements were clarified before release
  - Curated and updated the backlog for feature prioritization

- ## Frontend Developer @ Semrush (SaaS, internal services)

  Office, full-time, August '19 — July '20

  Project: internal service for setting goals in company units (similar to OKR)

  - Created an interactive organizational structure with a map of departments and teams (D3, React)
  - Contributed to the OSS library bkrem/react-d3-tree
  - Implemented code review with collective code ownership
  - Optimized the sprint planning estimation approach and implemented it with an Agile coach

- ## Web Developer @ Noveo (Outsourcer)

  Office, full-time, August '17 — December '18

  - Designed the interface for the game ["Go to IT"](Go to IT) (React)
  - Developed interfaces for American golf and baseball training service (Vue)
  - Designed for a French online clothing platform (Angular)

- ## Web Developer @ Armaseti (Email marketing)

  Hybrid, full-time, July '16 — August '17

  - Designed marketing newsletters and landing pages for the company
  - Created a new design for emails
  - Transitioned from email template builders to full-fledged flexible custom layouts
  - Created a complex vector layout for a valve diameter meter

Hobbies

> I enjoy giving talks (>30) and writing articles (>50). I contribute to open-source projects like Obsidian, Raycast, VSCode, and React libraries.

Side Projects

- [Pokoy](): A meditation timer app (Firebase, React, Redux Toolkit, PWA) — [Product Hunt]()
- [Marathons TG bot](): Bot for learning marathons (Node.js, Telegraf.js, Next.js, Google APIs) — [Github]()

Talks

I have spoken at: [PiterCSS Meetup](), [PiterPy Meetup](), [Burning Lead](), [Kolesa Conf](), [Vas3k.Club](). You can watch some of them [here]().
